

MACHINE TO GET BIO-FERTILIZER FROM NEEM FRUIT

Currently using chemical fertilizers are harmful to the soil and plants. So, we need to use Bio-Fertilizers. A good solution to this is by making neem powder from the neem fruit without extracting the oil from it. But the current machines are not effective. So, try to develop an idea for the machine which is semi-automatic / fully automatic. Make sure this machine is cost-effective as it needs to be accessible by the rural farmers.
